Import Data using Transform Maps (Spreadsheet)

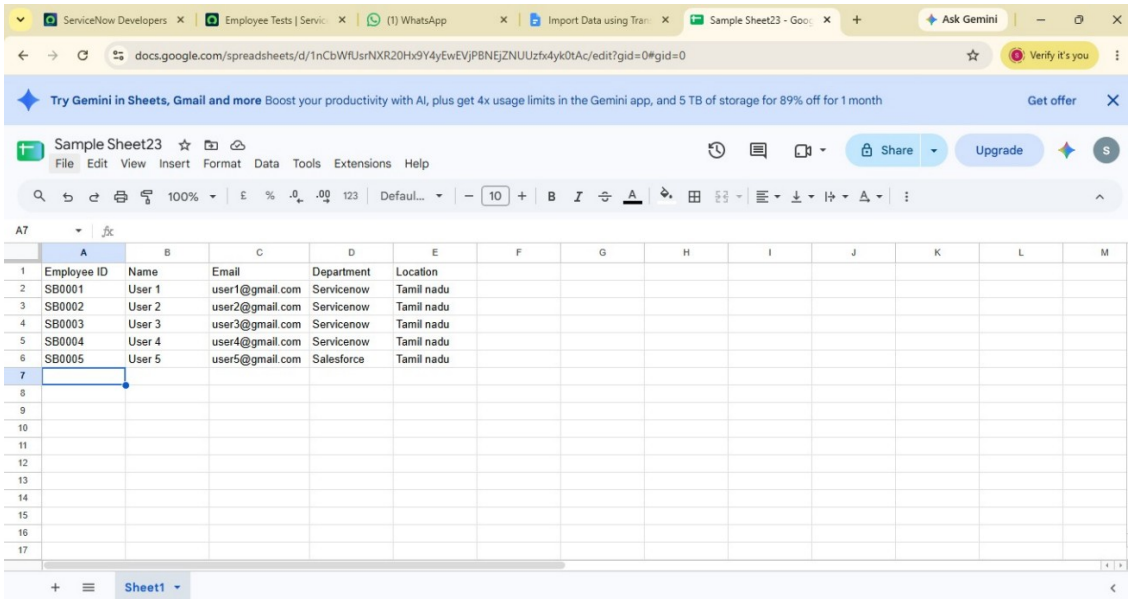

Description:

This micro project focuses on importing structured data from an external spreadsheet into the **ServiceNow** platform using Import Sets and Transform Maps. The project simulates a real-world scenario where bulk employee data is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The spreadsheet data is first loaded into an Import Set table, which serves as a staging area, and a Transform Map is then configured to map source fields to the appropriate target table fields. Upon executing the transformation, records are created in the target table and validated to ensure data integrity. This project helps beginners understand the end-to-end data import process in ServiceNow, including data loading, field mapping, transformation execution, and result verification.

Step by Step process:

Phase 1: Prepare the sheets

1. Open New Google Spreadsheet
2. Create New Google Spreadsheet with sample data as shown below

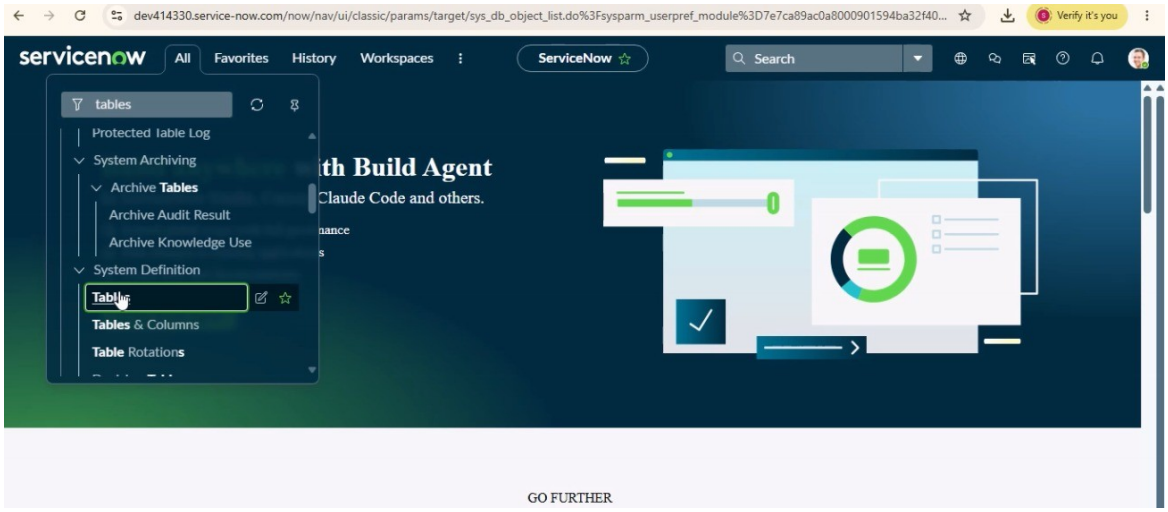

Employee ID	Name	Email	Department	Location
SB0001	User 1	user1@gmail.com	Servicenow	Tamil nadu
SB0002	User 2	user2@gmail.com	Servicenow	Tamil nadu
SB0003	User 3	user3@gmail.com	Servicenow	Tamil nadu
SB0004	User 4	user4@gmail.com	Servicenow	Tamil nadu
SB0005	User 5	user5@gmail.com	Salesforce	Tamil nadu

3. Download the spreadsheet as Sample Spreadsheet.xlsx format.

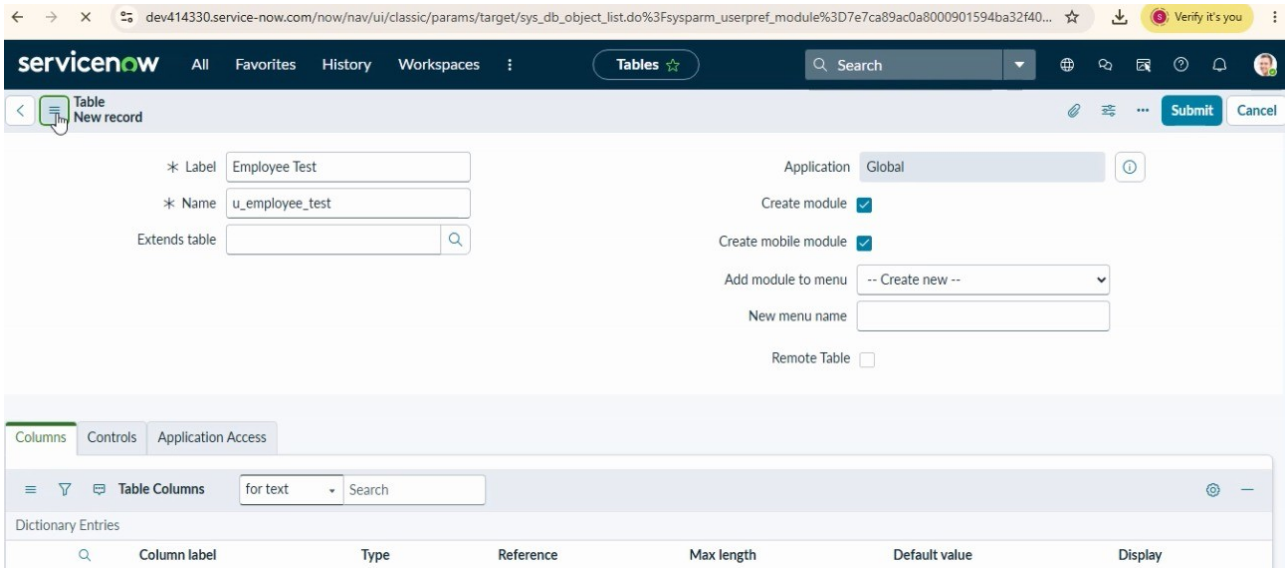

Phase 2: Create new Custom table

Navigation:

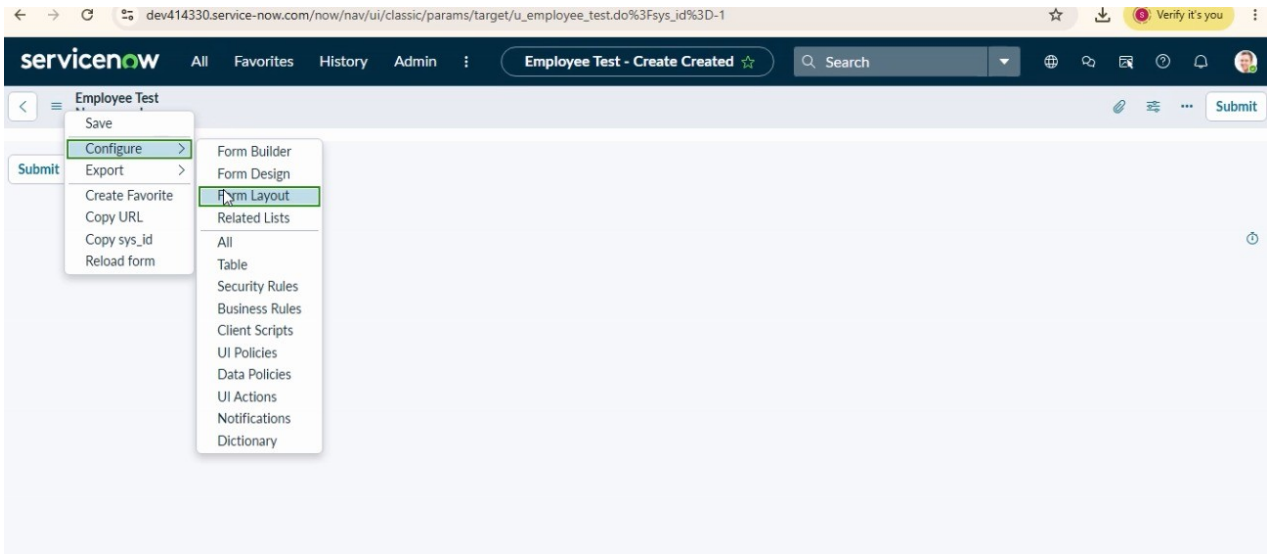

- Tables > Create New

- Label: Employee Test
- Name: u_employee_test
- After creating and saving the **Employee Test** table, **scroll down** to the bottom of the table form.

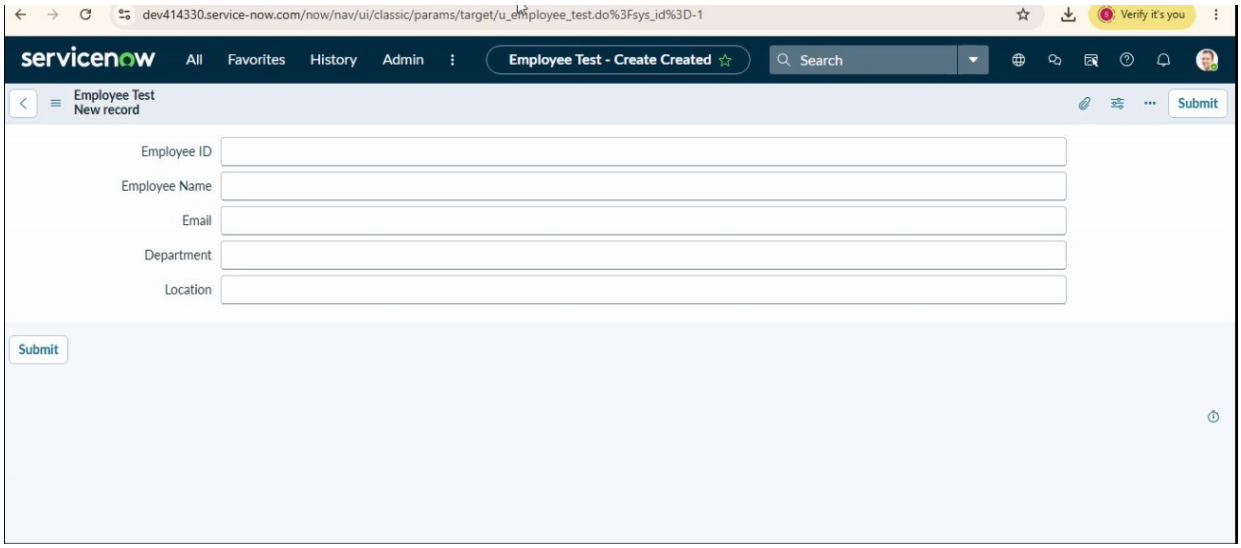

- Click **Show Form** to open the table form.
- On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.
- Click the **Form Context Menu / Additional Actions** icon.
- Click configure , select **Form Layout**.

- The **Form Layout** page will open, where you can configure the fields displayed on the form
- After opening **Form Layout**, click **New** to create a new field.
- Enter the field details:
- **Column Label:** Employee ID

- **Type:** String
- Click **Add** to create the field.
- Repeat the same steps to create the following fields:
  - **Employee Name** – Type: String
  - **Email** – Type: String
  - **Department** – Type: String
  - **Location** – Type: String
- After creating all the required fields, click **Save**.
- Verify that the newly created fields are displayed on the **Employee Test** form.

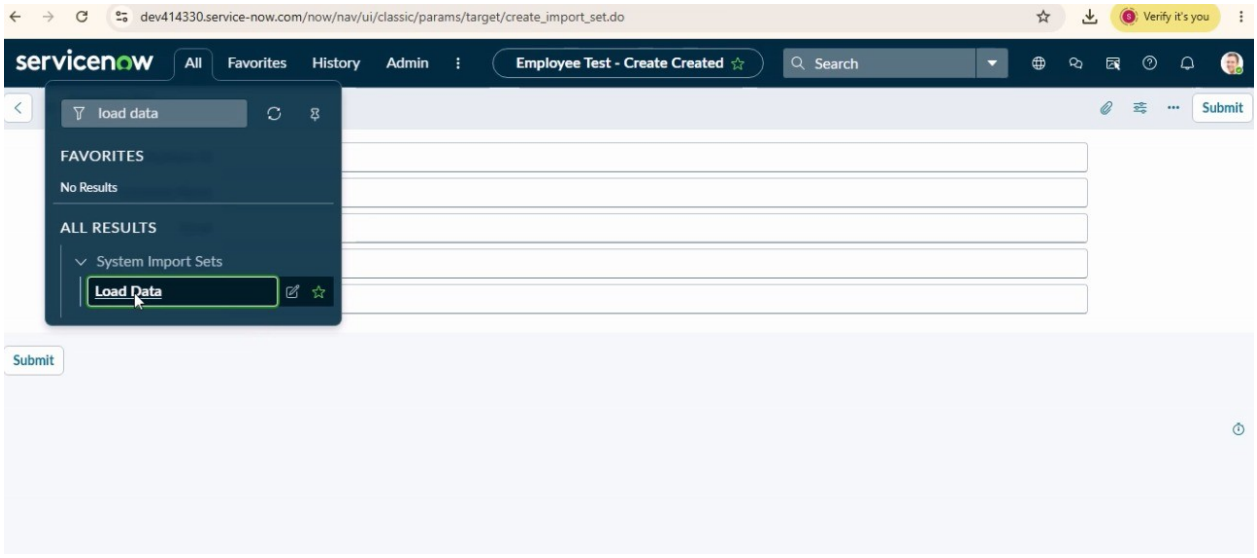

Click on Submit or Save.

Phase 3: Import Set Table

Navigation:

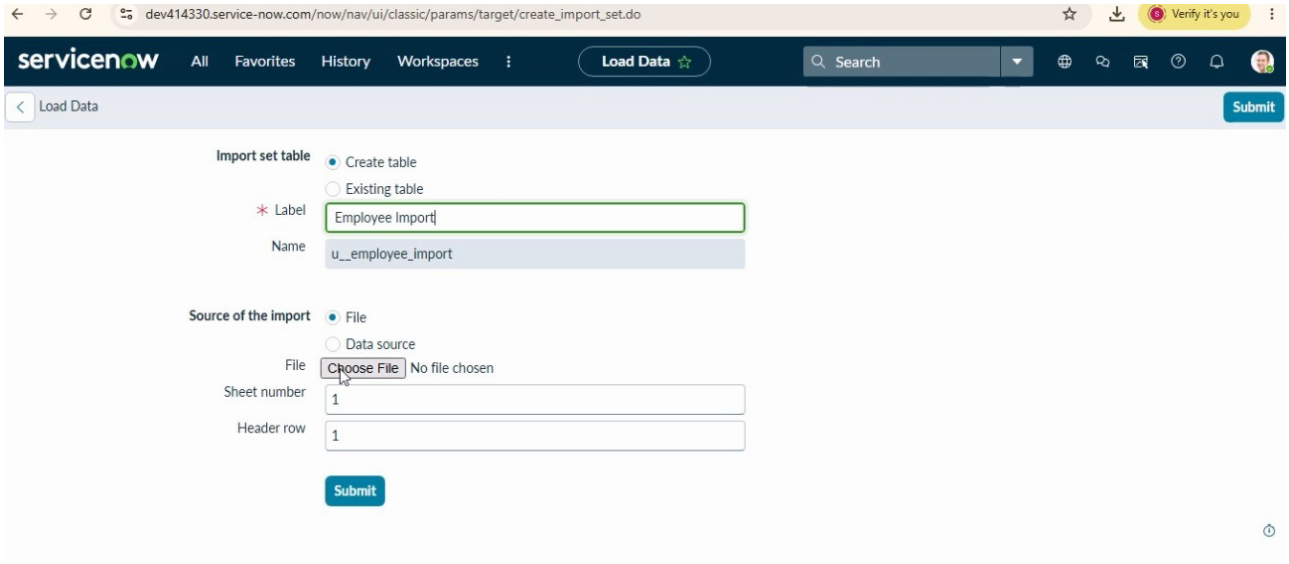

In Application Navigator → Load Data

Click on Load Data and create an import table

Fill details as shown below

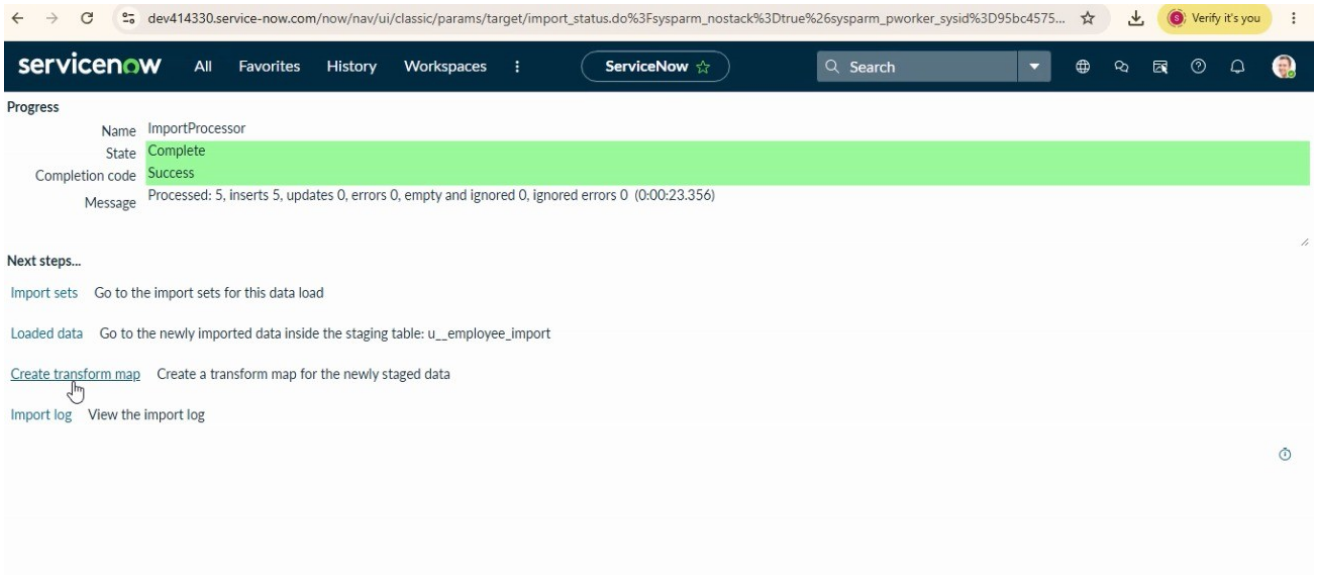

- Label: Employee Import
- Name: u_employee_import (auto populated)

- Click on Submit

Once we click on Submit, we can see the success message as shown below.

Also we need to make sure to click on Create Transform Map

Phase 4: Create Transform Map

In this phase we need to create the Transform Map by clicking on the Create Transform Map button as shown in above screenshot.

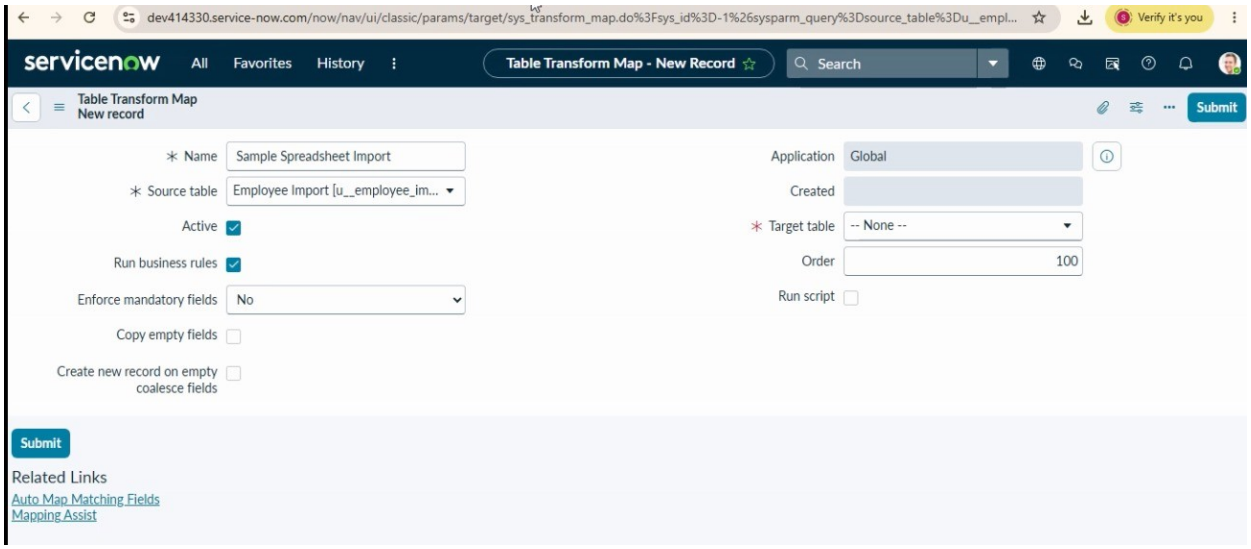

Give inputs as shown below.

Name: Sample Spreadsheet Import

Source Table: Employee Import is auto-populated

Target Table: Employee Test - as we created earlier

Click on Auto Map Matching fields.

Now click on Mapping Assist and map the fields with Source & Target Table

Click on Save

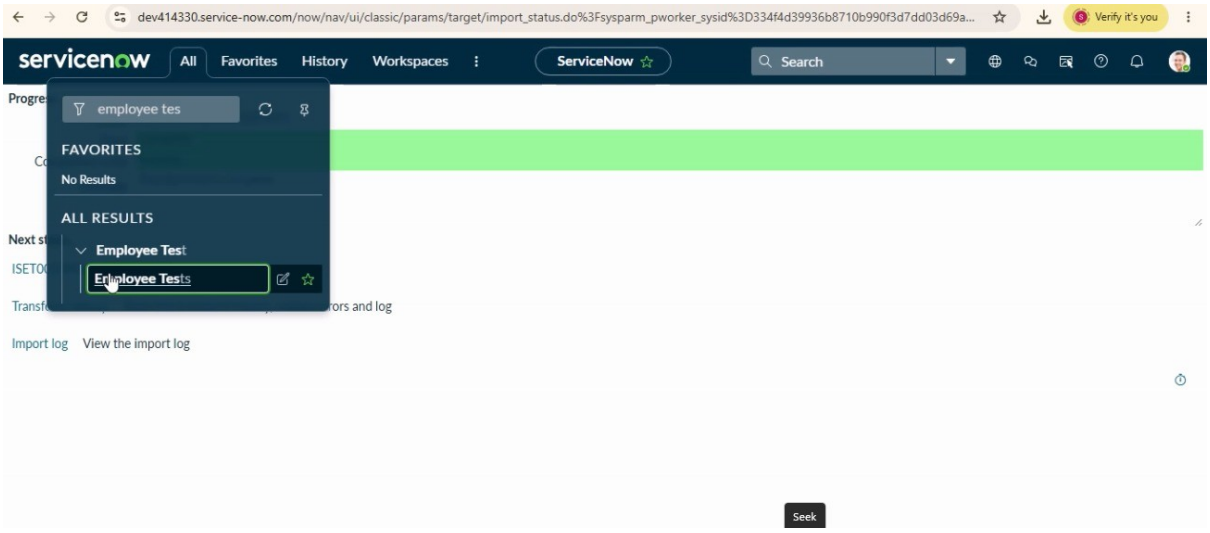

Make sure the both Source & Target table fields are mapped as shown below.

- Now click on Transform as shown below.
- Now click on Transform Button as shown below.
- After clicking Transform, make sure you see the success message as shown below.

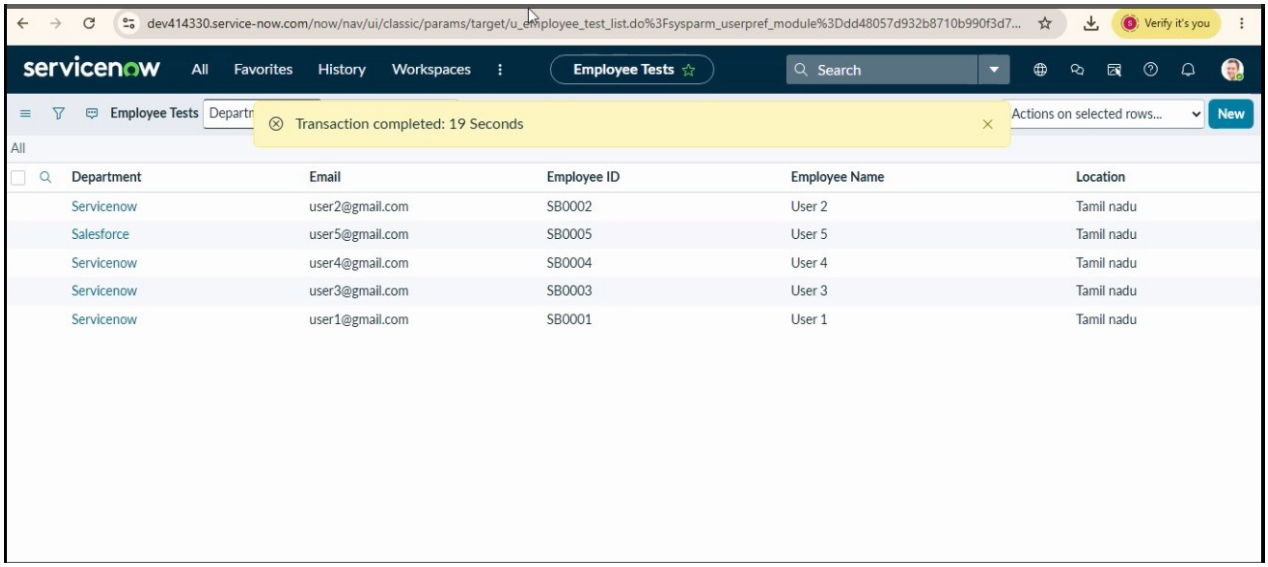

Phase 5: Transform Data & Validate

Navigation:

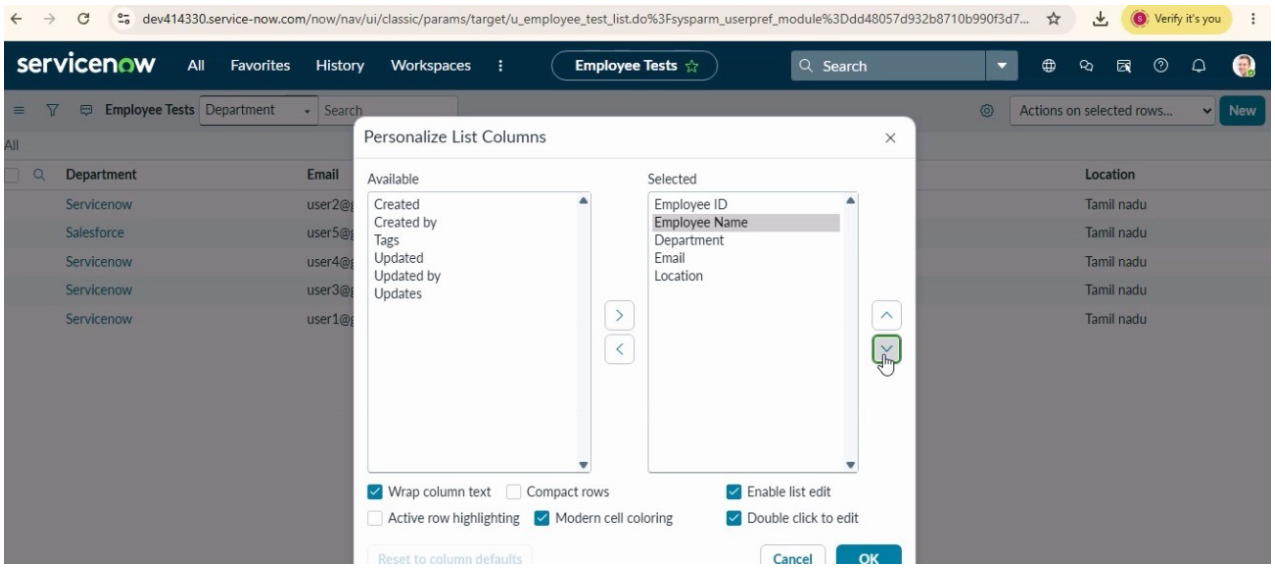

- Open Employee Test Table from application navigator as shown below.

- As our import got succeeded, all the records are created in the Employee Test Table.

- Make sure you rearrange the fields accordingly by using Personalised List Columns

Click on OK

Final Result:

All the records are successfully imported into the ServiceNow system with Import Set, Transform Map.

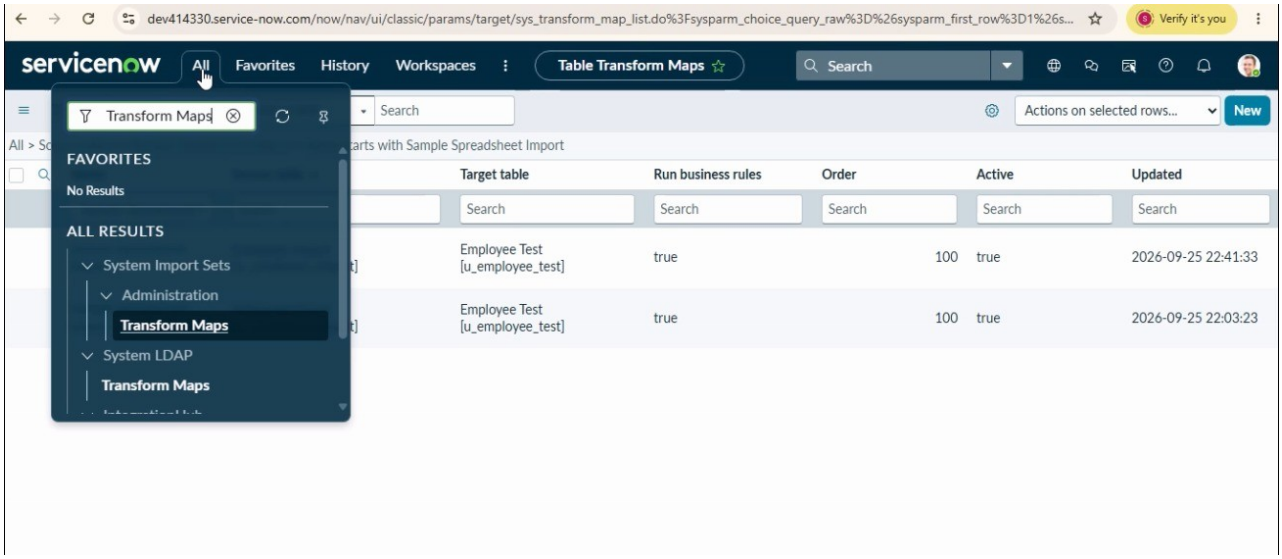

Phase 6: Enable Coalesce to Avoid Duplicate Records

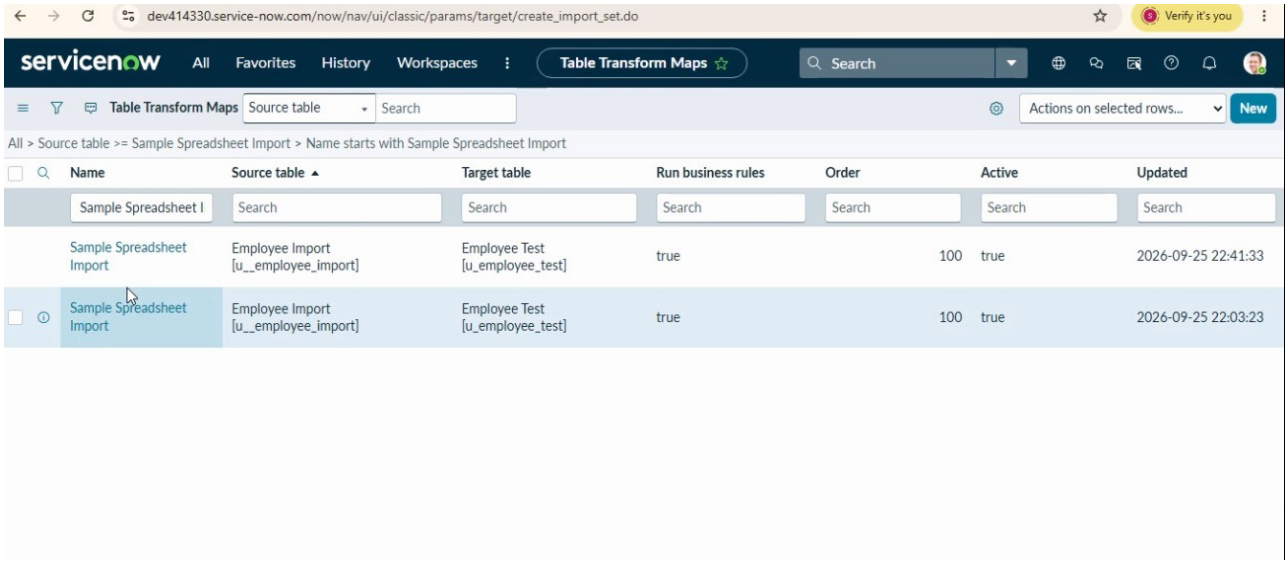

- In real projects, the same employee data may be imported multiple times.

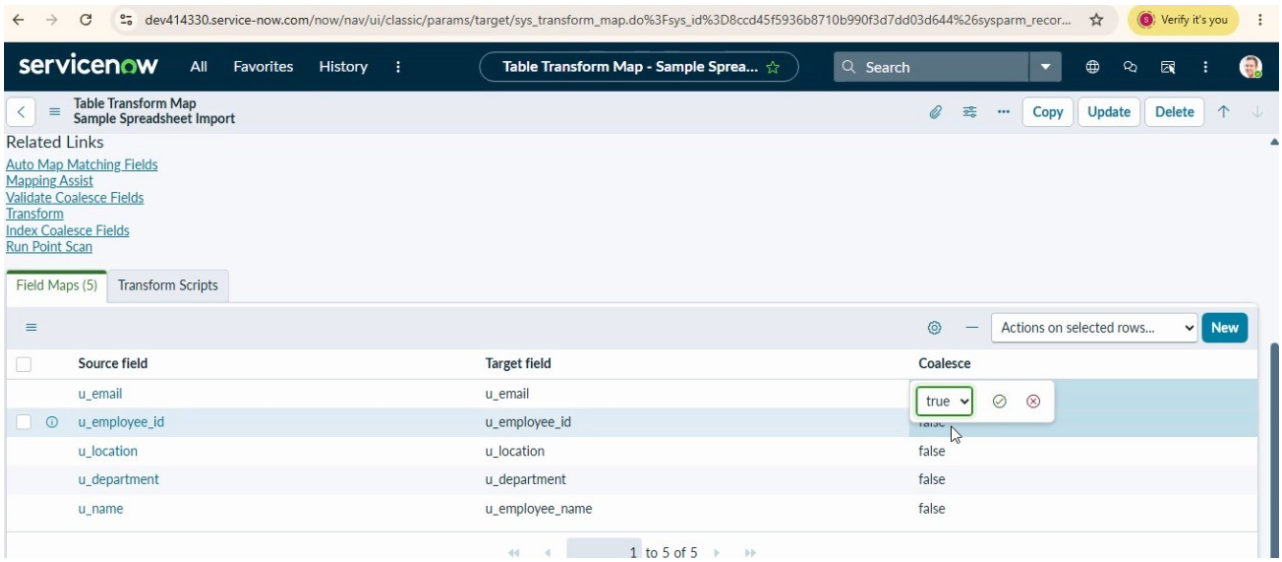

- To prevent duplicate employee records, we use **Coalesce**.
- The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

1. Open Transform map Under System LDAP On All menus.
2. Open the Created Transform map , Name is Sample Spreadsheet Import.
3. Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.
4. Now save the form.
5. Then again add some data which is in Excel format.

PHASE 7 : Inserting New Data In Excel Format

Steps :

- Navigate to All menus.
- Search for Load data Under System Import set Open Load Data.
- Fill the details as
- Import set table as select Existing table {Employee Import}.
- Source of Import is Select File and choose the file from Files.
- Sheet number : 1, Header row : 1.
- Now Click submit.

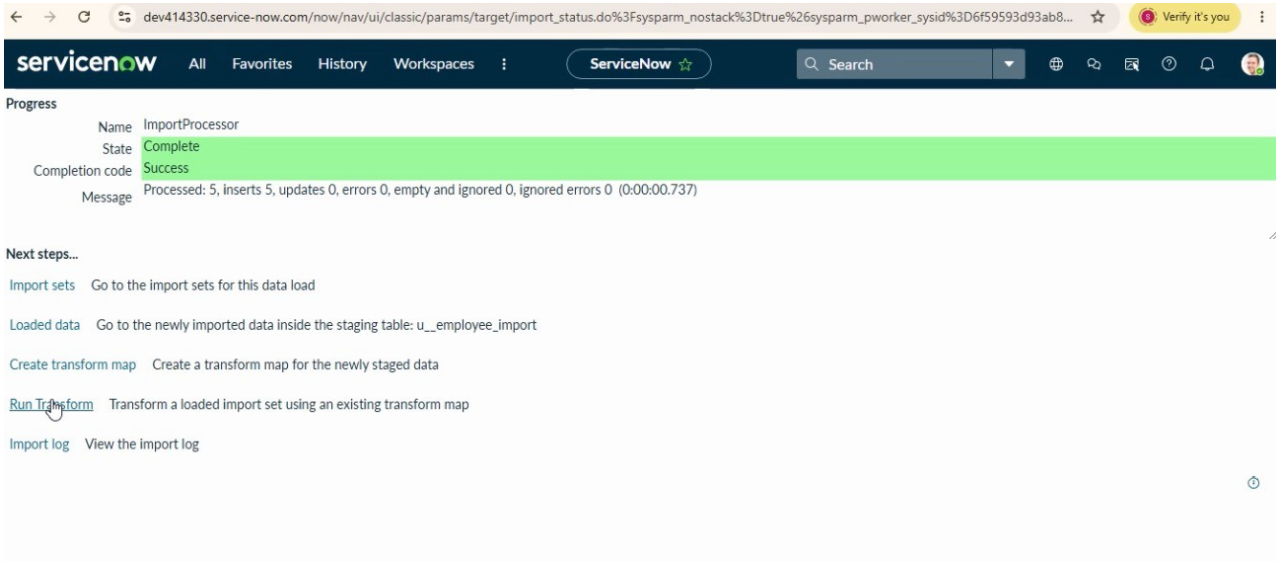

- Newly Created Excel Data is this.
- It is the previously added data.
- Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.
- That Raviteja Employee Email was Changed to

[test10@gmail.com → test18@gmail.com].

- And Employee ID with SB-OOO4 name was changed to

[Ajay kumar → Ajay].

- And two other new Employee ID’s are added.
- Now after submitting the form it appears as State Completed and Success.

- Now Click the Run transform Under the next steps.
- Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.
